

## BSS84 / BSS110 P-Channel Enhancement Mode Field Effect Transistor

### General Description

These P-Channel enhancement mode power field effect transistors are produced using Fairchild's proprietary, high cell density, DMOS technology. This very high density process is designed to minimize on-state resistance, provide rugged and reliable performance and fast switching. They can be used, with a minimum of effort, in most applications requiring up to 0.17A DC and can deliver pulsed currents up to 0.68A. This product is particularly suited to low voltage applications requiring a low current high side switch.

### Features

- BSS84: -0.13A, -50V.  $R_{DS(ON)} = 10\Omega$  @  $V_{GS} = -5V$ .  
BSS110: -0.17A, -50V.  $R_{DS(ON)} = 10\Omega$  @  $V_{GS} = -10V$
- Voltage controlled p-channel small signal switch.
- High density cell design for low  $R_{DS(ON)}$ .
- High saturation current.

### Absolute Maximum Ratings

$T_A = 25^\circ C$  unless otherwise noted

Symbol	Parameter	BSS84	BSS110	Units
$V_{DSS}$	Drain-Source Voltage		-50	V

**Packaging Description:**

SOT-23 parts are shipped in tape. The carrier tape is made from a dissipative (carbon filled) polycarbonate resin. The cover tape is a multilayer film (Heat Activated Adhesive in nature) primarily composed of polyester film, adhesive layer, sealant, and anti-static sprayed agent. These reeled parts are optioned with 3000 units per 7" or 177mm diameter reel. The reels are dark blue in color and made of polystryrene plastic (anti-static coated). Other option comes in 10000 units per 13" or 330mm diameter reel. This and some other options are described in the Packaging Information table.

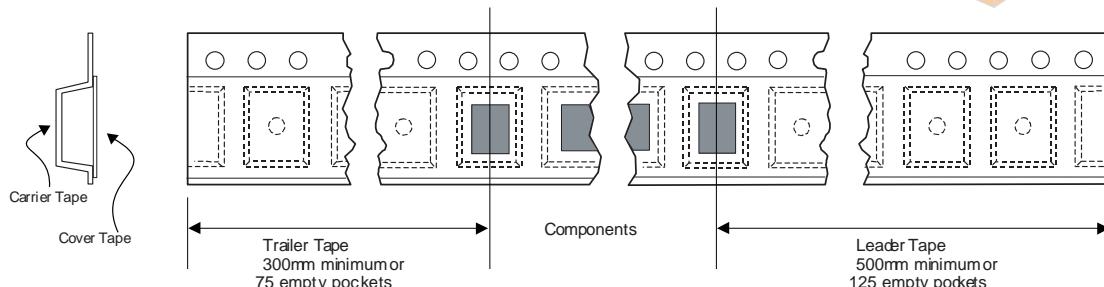

These full reels are individually labeled and placed inside a standard intermediate made of recyclable corrugated brown paper with a Fairchild logo printing. One pizza box contains eight reels maximum. And these intermediate boxes are placed inside a labeled shipping box which comes in different sizes depending on the number of parts shipped.
