

30 October 2006

Dear Valued Customer:

Regarding: Declaration of Compliance to Hazardous Substance from DSG-Canusa

DSG-Canusa, a global leader in the design and manufacture of heat shrink insulation and environmental sealing heat shrink products, confirms their full and complete compliance to both the European Union's **End-of Life (ELV)** and **Restriction of Hazardous Substance (RoHS)** directives for Automotive, Electronics and Electrical components.

These directives aim to reduce the amount of hazardous materials (lead, Cadmium, mercury, Polybrominated biphenyls and Polybrominated diphenyl ethers) and contribute to the protection of human health through the environmentally sound recovery and disposal of waste automotive, electrical and electronic components and equipment.

DSG-Canusa adherence to the ELV directive dates back to 2000 while complete RoHS compliance was achieved as of 31 December 2005. A comprehensive list of compliant products follows.

For more information please contact me at 416 743 7111 or rbrown@dsgcanusa.shawcor.com.

Sincerely,

Raynes Brown
